NJIT ALUMNI CHOOSE BEST TEACHER

NEWARK, N.J. -- Stanley S. Reisman of Livingston, associate professor of electrical engineering at New Jersey Institute of Technology, has been chosen by the university's alumni to receive the 1985 Robert W. Van Houten Award for Excellence in Teaching. The award, named in honor of a former president of NJIT, will be presented at the Institute's commencement exercises Thursday, May 23. It carries a stipend of \$1000.

Dr. Reisman, who joined NJIT in 1968, specializes in research in bioengineering, especially the areas of medical instrumentation, computer simulation, and random processes and linear systems. His work in biomedical signal processing has led to the improvement of techniques in diagnosing brain lesions and hearing loss. He has actively encouraged his students to become involved in the research and thus make significant contributions to bioengineering advances even before they graduate.

A licensed professional engineer, Dr. Reisman holds a Master of Science degree in electrical engineering from Massachusetts Institute of Technology and a Ph.D. degree in bioengineering from Brooklyn Polytechnic Institute. He is a fellow of the New Jersey Academy of Medicine and a member of the Institute of Electrical and Electronics Engineers and the Association for the Advancement of Medical Instrumentation.
