

CS 114.009-11 Intro. to Computer Science II, Fall 2023

Class: W 1:00–2:20 KUPF 210

Prof. J. M. Calvin

Lab: M 10-11:20 KUPF 106 (Sect. 9)

email: calvin@njit.edu

Lab: M 1:00-2:20 GITC 2305 (Sect. 11)

web: <http://web.njit.edu/~calvin>

Office Hours: M 2:30-3:50, W 10:45-11:25,
or by appointment.

Tel: 973-596-3378

Office: GITC 4311

Prerequisite

CS 113.

Course Goals

This course is an introduction to the study of data structures and algorithms, emphasizing implementations in the Java programming language. At the conclusion of the course, students will be able to solve problems using standard data structures and algorithms, and be able to bound the resources used by an algorithm.

Learning Outcomes

- The ability to write computer programs using standard data structures and algorithms.
- The ability to bound the resources used by an algorithm.

Textbooks

Data Structures & Algorithm Analysis in Java, Edition 3.2, by Clifford A. Shaffer, Dover, 2011. ISBN: 0486485811. You can access this book from the author's web page: <https://people.cs.vt.edu/shaffer/Book/JAVA3elatest.pdf>.

You may find the following textbook useful:

Data Structures and Algorithms in Java (fifth edition), by M. Goodrich and R. Tamassia, Wiley, 2010. ISBN 978-0-470-38326-1.

A more advanced text is

Introduction to Algorithms (second edition), by T. Cormen, C. Leiserson, R. Rivest, and C. Stein, The MIT Press, 2001. ISBN 0-262-03293-7.

Course Materials and Communications

We will be using the Canvas system (<http://canvas.njit.edu>). All class information will be posted there.

You will use Vocareum for submitting homework programs. You will be able to access Vocareum through Canvas.

If you have a personal issue that you need to bring to my attention (for example a grading issue) you should email me. For other communications, you should use Discord (especially questions on homework or what will be on the exam).

Before each lecture I will post the homework assignment for the coming week. I will sometimes post sample programs. Before posting a program, I will verify that it works on Vocareum. If you encounter trouble running one of these programs on Vocareum, let me know. If a program does not run on your personal machine, you can post information on Canvas (the details of the software that you are using and the error(s) you see), and perhaps someone in the class will have a suggestion. However, there is no guarantee that anyone will be able to help you with your personal setup.

Grading

Homework will be posted at the beginning of each lecture, and will be due by the beginning of lecture the following week. Typically, homework assignments will have a programming component and an analysis component. There will be a quiz during the lecture period each week, based on work up through the previous week. You must have your own computer, and be present in the classroom, to take the quizzes.

There will be a final exam, at a time that will be announced by the registrar later in the semester. The final exam will be cumulative, and cover all material in the lectures, labs, homework programs, and practice problems.

If you miss a lecture or a lab, you are responsible for finding out what was covered from classmates.

The course grade will be based on the homework (35%) and in-class quizzes (35%) and final exam (30%). The lowest three quiz scores will be dropped. The grading scale (out of 100) is: 85 – 100 A, 75 – 84 B+, 65 – 74 B, 50 – 64 C+, 40 – 49 C, 32 – 39 D+, 25 – 31 D. In addition, a grade of at least 20% is required for each component (homework, quizzes, and final) to pass the course. I reserve the right to modify the scale.

In order to be excused from a component of the course that contributes to the final grade, you must supply documentation explaining your absence to the office of the dean of students, and they will in turn contact me.

Exception: If you feel sick on the day of the class, notify me by email *before* the start of class and you will be excused from the quiz on that day. If this happens more than once, you will be given an oral makeup exam.

Academic Integrity

Academic Integrity is the cornerstone of higher education and is central to the ideals of this course and the university. Cheating is strictly prohibited and devalues the degree that you are working on. As a member of the NJIT community, it is your responsibility to protect your educational investment by knowing and following the academic code of integrity policy that is found at:

<http://www5.njit.edu/policies/sites/policies/files/academic-integrity-code.pdf>.

Please note that it is my professional obligation and responsibility to report any academic misconduct to the Dean of Students Office. Any student found in violation of the code by cheating, plagiarizing or using any online software inappropriately will result in disciplinary action. This may include a failing grade of F, and/or suspension or dismissal from the university. If you have any questions about the code of Academic Integrity, please contact the Dean of Students Office at dos@njit.edu.

All work that you submit must be your work only. Any evidence of cheating on a graded course component will result in a grade of zero for that component.

Course Outline

1. Introduction
2. Recursion
3. Math background, common functions
4. Algorithm analysis, asymptotic analysis
5. Lists, stacks, queues
6. Dictionaries
7. Binary trees, search trees
8. Priority queues, heaps
9. Sorting
10. Sorting lower bound, linear-time sorting
11. Selection
12. Graphs
13. Graph algorithms
