NJIT

Department of Computer Science

CS 610-102: DATA STRUCTURES & ALGORITHMS

Spring 2023	CULM LECT 3	Tue 6:00 PM - 8:50 PM

Instructor: Marzieh Eskandari **Email:** marzieh.eskandari@njit.edu **Webex**: https://njit.webex.com/meet/me374

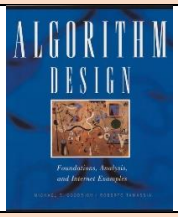
Office: GITC 4313	**Office Hours:** Tue 12:45-2:15, Fri 4:45-5:45

Prerequisites:

1. Undergrad course on Data Structures & Algorithms (CS 505 or equivalent);
2. Discrete Math (CS 506 or CS 241 or equivalent);
3. Programming Maturity.

Textbook:

Michael Goodrich and Roberto Tamassia,
Algorithm Design: Foundations, Analysis, and Internet Examples, Wiley, 2002.
ISBN: 0-471-38365-1. (Available at NJIT bookstore)



Evaluation:

Assignments: 15%
Attendance: 5%
Midterm Exam 1 (**February 14**): 20%
Midterm Exam 2 (**March 28**): 20%
Makeup Exam (**April 25**)
Final Exam (**May**): 40%

Note 1: NJIT Picture ID required for all exams. All exams are closed books and closed notes.

Course Description:

This is a graduate-level course on data-structures and algorithms, with an emphasis on algorithm design techniques and analysis of algorithms. Topics include analysis techniques, worst-case and average-case analysis, recursion, recurrence relations, priority queues, hash tables, binary-search trees, balanced search trees (AVL trees, red-black trees), sorting algorithms; divide-and-conquer design technique and other design techniques such as greedy-method and dynamic-programming, graph algorithms.

Course Objectives (what you are expected to get out of this course):

1. Learn basic analysis techniques
2. Learn basic design techniques
3. Learn recurrence equations and how they are used in analysis of algorithms
4. Learn advanced data structures: Priority queues, heaps, hash tables, and search trees
5. Understand sorting algorithms and their complexities
6. Learn basic graph algorithms and their applications

Grading:

The grading scale (out of 100) is: 90–100: A, 80–89: B+, 70–79: B, 60–69: C+, 50 – 59: C, 40-49: D

Academic Integrity:

Academic Integrity is the cornerstone of higher education and is central to the ideals of this course and the university. Cheating is strictly prohibited and devalues the degree that you are working on. As a member of the NJIT community, it is your responsibility to protect your educational investment by knowing and following the academic code of integrity policy that is found at: http://www5.njit.edu/policies/sites/policies/files/academic-integrity-code.pdf

Please note that it is my professional obligation and responsibility to report any academic misconduct to the Dean of Students Office. Any student found in violation of the code by cheating, plagiarizing or using any online software inappropriately will result in disciplinary action. This may include a failing grade of F, and/or suspension or dismissal from the university. If you have any questions about the code of Academic Integrity, please contact the Dean of Students Office at dos@njit.edu

Schedule of Assignments & Due Dates:

Assignment	Subject	Due Date
Homework 1	-	Jan 31
Midterm Exam 1	Time Complexity, Recursive Algorithms, Lists, Stacks, Queues, Trees, Priority Queues, Heaps, Heapsort	Feb 14
Homework 2	-	Mar 21
Midterm Exam 2	Sorting, Dictionary and Hash Tables, Balanced Search Trees and Graphs	Mar 28
Homework 3	-	Apr 18
Final Exam	Divide-and-Conquer, Greedy, Dynamic Programing	May

Course Outline:

Week	Date	Topic
1	Jan 17	Introduction, Analysis Techniques, Examples of worst-case and average-case analysis, Complexity definitions: O( ), Omega, Theta
2	Jan 24	Recursive Algorithms, Recurrence Relations, Binary Search
3	Jan 31	Lists, Stacks, Queues, Trees
4	Feb 7	Priority Queues, Heaps, Heapsort
5	Feb 14	Review/Midterm Exam 1
6	Feb 21	Sorting Algorithms: Insertion-Sort, Bubble-Sort, Selection-Sort, Merge-Sort, Quicksort, Integer Sorting: Bucket-Sort, Radix Sort Lower-Bound on Sorting by Comparison
7	Feb 28	Dictionary ADT and Hash Tables
8	Mar 7	Balanced Search Trees: AVL and Red-Black trees Graphs: Definitions, Representations and Traversals
Spring break		
9	Mar 21	Divide-and-Conquer (Strassen's Matrix Multiplication, Large Integer Multiplication, Min & Max)
10	Mar 28	Review/Midterm Exam 2
11	Apr 4	Greedy method (Fractional Knapsack, Task Scheduling, Huffman Coding, Single-Source-Shortest-Paths (Dijkstra))
12	Apr 11	Greedy method (MST Algorithms: Prim, Kruskal) Dynamic Programming (introduction, Binomial coefficients)
13	Apr 18	Dynamic Programming (All-Pairs-Shortest-Paths (Floyd), Matrix Chain Multiplication, Optimal Binary Tree Search)
14	Apr 25	Review/Makeup Exam
