# **CS 683: Software Project Management**

## **Syllabus**

#### Instructor

Instructor:	William Phillips
Office and Hours:	Fridays 4-5 location TBD
Email:	wop2@njit.edu
Location	KUPF 203
TA	Krisha Shah krs@njit.edu

#### **Course Description**

This course focuses on Scheduling, Software Metrics, Software Quality Assurance (SQA), Software Configuration Management (SCM) and Standards. You and your team will be managing a team who will be working on an application to monitor wastewater levels for a municipality in order to detect problems that can lead to flooding or contamination.

#### **Textbooks**

proganoa. Boyao, coomaa. 71 Bown 10 Earth	Other Texts will be referenced in lectures but excerpts will be provided on slides or pdfs.
Bruegge, et.al. Object Oriented Software Engineering	pdf posted

### **Grading Scheme**

Exams	30%
Homework	30%
Project Deliverables	40%

#### **Student Outcomes**

This course gives the student the necessary background to allow her/him to manage software projects; this includes economic, managerial and organizational aspects. The essence of software engineering is not only to introduce a valuable software product, but to do so economically and competitively. Like any engineering discipline, software engineering depends critically on managerial, economic and organizational considerations. Students will learn software management technique, various software costing techniques including Boehm's Constructive Cost Model (COCOMO) and Return on Investment (ROI), team organization and management, and various methods of software development including Cleanroom and Agile.

#### **Topics**

### **Non-Cheating Policy**

Cheating on a programming assignment results in zero credit for all students involved. Cheating on an exam will result in an "F" in the course.

You may discuss problems with each other, in fact, you are encouraged to do so.

Violations of the honor code will be dealt with seriously and reported immediately to the Dean of Students.

#### **Late Policy**

To receive credit assignments must be handed in on time. No credit will be given for any programming assignment that is not turned in on the day (and time) it is due.

#### **Prerequisites**

Graduate Standing or permission (obtained from the administration) if you are undergraduate.

Week Lecture Topic **Project Deliverable** Text **Ending** Chapter Sept 8 Introduction Software Project and Information Sheets 1 Software Configuration Management **Functional Baseline** Types of (software projects)/ Project Software Development Plan 2/3 Sept Description/ Reviews/ Object 15 assigned (by Sept 18) Oriented Analysis. # **Grading Breakdown**

•	Monthly Reports	15%
•	Software Development Plan	15%
•	Review of Deliverables	20%
•	Term Paper/Presentation	20%
•	Midterm	10%
•	Final	20%

- The first two lectures will cover what a software project is: what it is we are managing (the software configuration) and how to measure its attributes (software quality assurance, testing and metrics.
- Deliverables: Monthly reports and presentations are team efforts. All members of the team get the same grade for the team assignments.
- I will be referring to/using other texts to cover topics above. There are a few books that a software engineer should be familiar with. The Kindle version of the text is available on Amazon for under \$5 or you can get the paper version for not that much more. Material from other texts I will make available, or power point slides will be provided.
- Your team will need to read and review UML use case, class, sequence and possibly, state diagrams created by the CS490 team you are managing.
- All lectures will be broadcast live, recorded and posted to canvas. I intend to be on campus for the majority of lectures.
- I will have the blank fields in the syllabus filled in by the start of class.
