

Course Syllabus

DS 636: Data Analytics with R Programming
Spring 2023

Schedule: Thursdays 1:00 pm - 3:55 pm, CKB204

Instructor: Zhi Wei, GITC 4214C, email: zhiwei@njit.edu

Class webpage: <https://canvas.njit.edu/>

Course Description and format:

This course will teach how to program in R and how to use R for effective data analysis. The students will learn how to install and configure R necessary for an analytics programming environment and gain basic analytic skills via this high-level analytical language. The course covers fundamental knowledge in R programming. Popular R packages for data science will be introduced as working examples. The format of the course will include lectures by the instructor, computing labs, class discussion, directed reading, and student presentation or project. The exact format will depend on the size of enrollment and student background.

Prerequisite: Some basic knowledge of programming, probability and statistics. If in doubt about the prerequisites, please consult with the instructor for permission to take the class.

Learning Outcomes:

- Gain programming proficiency of R
- Become familiar with commonly used analytical techniques in Data Science
- Know how to evaluate commonly used analytical techniques in Data Science
- Develop the way of data science thinking.
 - Learn how to preprocess, explore and interpret real data.
 - Learn how to model real problems using computational techniques.

Attendance: You are supposed to attend all the classes. Participation is highly encouraged to make the class more interactive. Class attendance and participation are taken into consideration by the instructor for the evaluation of the students. In general, students who attend class regularly perform much better than those who come only occasionally. If you miss one class be sure to consult one of your classmates about the content of the lecture and visit the course web page and moodle (moodle.njit.edu) to get notes, exercises, assignments, deadlines and announcements.

Textbooks:

- R Programming for Data Science, by Roger D. Peng,
<https://leanpub.com/rprogramming>
- Using R for Introductory Statistics, by John Verzani, Chapman & Hall/CRC, 2004, ISBN 1584884509
- Advanced R, by Hadley Wickham, ISBN 9781466586963.

Grading:

The requirements of this course will consist of participating in lectures, homework, in class computing lab assignments, two exams and a project. The grading breakdown is the following:

- Homework, computing lab exercise (5%)
- Quiz (20%)

- Term Project (15%)
- Midterm (25%)
- Final Exam (35%)

Late Assignment Policy

Written Homework and Programs are due at the beginning of class. 25% penalization per late day; Not accepted more than 3 days late.

Collaboration and Honor Code

Students may discuss problems together but must write up their own solutions. When writing up the solutions, students should write the names of people, if any, with whom they discussed the assignment. Note in particular that copying homework or programming assignments, in full or in part is forbidden. Students found cheating or plagiarizing will be immediately referred to the Dean of Students and the NJIT Committee on Professional Conduct and subject to Disciplinary Probation, a permanent marking on the record, possible dismissal, and an “F” grade in the course. All submitted assignments will be checked for similarities, and plagiarism and guilty students identified.

Tentative course topics (Subject to changes according to progress*)

Week	Topic
1	Class overview + Introduction R Nults and Bolts (I)
2	R Nults and Bolts (II)
3	Getting Data In and Out of R
4	Control Structures and Functions
5	Loop Functions
6	String Operations (stringr package)
7	Data Manipulation (dplyr, reshape2 packages)
8	Term Project Progress Presentation/Review
9	Midterm Exam
10	Probability Basics & Data Exploration
11	Regression and Classification (linear Models)
12	Model Selection + representative Classifiers
13	Clustering
14	R Graphics and Debugging; Packaging & Profiling; Real Case Study
15	Final Project Presentation

*This schedule is subject to change at the discretion of the instructor or in the event of extenuating circumstances. Students will be notified in class of any changes to the syllabus.
